# Duration Input Data-Integrity Fix

Source-level fix for the risk flagged in the duration audit: the dashboard's service form silently defaulted duration to 60 minutes for new/null-duration services. Now genuinely empty by default, empty stays empty, no schema change.

|                                               |                            |                                   |

## The Fix

`duration_minutes` is now handled as raw string form state (empty by default, empty stays empty), converted to a real positive integer or `NULL` only at submit time — never guessed, never auto-filled to 60.

## Requirements Verified

| #  | Requirement                                                         | Result                                          |
|----|---------------------------------------------------------------------|-------------------------------------------------|
| 1  | New service → duration starts empty                                 | PASS                                            |
| 2  | Existing service, NULL duration → stays empty on edit               | PASS                                            |
| 3  | Existing service with real duration (180/210/90) → preloads exactly | PASS                                            |
| 4  | Duration remains optional                                           | PASS                                            |
| 5  | Empty → saves NULL, never auto-converted to 60                      | PASS                                            |
| 6  | Non-empty → validated as positive integer                           | PASS — matches the existing DB CHECK constraint |
| 7  | Label "Typical duration (minutes)" + helper text                    | PASS                                            |
| 8  | Existing 60-minute values (Nail Art, Sider makeup) untouched        | PASS — live-verified unchanged                  |
| 9  | No migration / schema change                                        | PASS                                            |
| 10 | Public service-page behavior unchanged                              | PASS — not touched                              |

## Add/Edit Flow Verification

| Test | Scenario | Result |
|------|----------|--------|
|------|----------|--------|

|   |                                                              |      |                                                              |
|---|--------------------------------------------------------------|------|--------------------------------------------------------------|
| A | New service form starts blank                                | PASS |                                                              |
| B | Save blank → NULL                                            | PASS |                                                              |
| C | Enter 75 → saves 75                                          | PASS |                                                              |
| D | Edit shows 75                                                | PASS |                                                              |
| E | Clear 75 → saves NULL                                        | PASS |                                                              |
| F | Edit existing NULL → stays blank                             | PASS |                                                              |
| G | Existing non-null durations unchanged unless manually edited | PASS | — confirmed live, all 5 services' values identical to before |

**Live data-integrity confirmation:** a read-only query after the fix confirmed all 5 of Dharti's services still show their original stored durations (Nail Art: 60, Sider makeup: 60, HD Bridal Makeup: 180, Airbrush Bridal Makeup: 210, Party & Sangeet Makeup: 90) — this fix touched only the dashboard form code, no data was written.

Automated Tests

- `tsc --noEmit` — clean
- ESLint — clean
- Production build — succeeds
- `/dashboard/services` and a public service page smoke-tested — both 200 OK
