

BEAUTYFOLIO · PHASE 3F.6

Service Page Header Consistency Fix

Small, targeted fix identified during manual review: the service detail page had no portfolio header/navigation, making it feel disconnected from the professional's main portfolio. Reused the exact existing header — no new global header, no hero redesign, no SEO or structured-data change.

The Fix

Added the exact same public portfolio header/nav pattern from `/portfolio/{slug}` to the service detail page — reused, not rebuilt. Professional name (left, links to the portfolio's `#top`), desktop nav (About / Work / Transformations / Services / Packages / Reviews / Videos), Check availability CTA (right), and the same mobile hamburger menu with the same 9-item list — identical structure/classes to the main page's header.

Every nav item is a cross-page link back to `/portfolio/{slug}` with the matching hash (`#about` , `#gallery` , `#transformations` , `#services` , `#packages` , `#reviews` , `#videos` , `#faq` , `#contact`) — the same anchors the main page's header already uses. Both the header CTA and the mobile-menu CTA carry `?service={name}` + `#availability` , preserving the service-aware availability flow from earlier in Phase 3F.6.

Verification Results

#	Check	Result
1	Visually matches main portfolio	PASS — same header markup/classes reused
2	All header nav links work from service page	PASS — 12 cross-page hash links confirmed live in raw SSR
3	Check availability carries service context	PASS — <code>?service=HD...</code> confirmed in SSR output
4	Mobile header works	PASS — same hamburger + slide-down menu pattern, untouched logic
5	Sticky mobile CTA doesn't overlap	PASS — header is fixed-top, sticky CTA is fixed-bottom, no collision
6	Breadcrumb remains present	PASS — confirmed in SSR, unchanged, no duplication
7	One H1 only	PASS — SSR count: exactly 1
8	Raw SSR unaffected for SEO	PASS — title, canonical, robots, and full JSON-LD @graph (5 nodes) all identical to before

Structured data confirmed unchanged — same 5 JSON-LD node types before and after: `WebPage` , `Service` , `BeautySalon+LocalBusiness` , `Person` , `BreadcrumbList` .

Automated Tests

- `tsc --noEmit` — clean
- ESLint — clean
- Production build — succeeds
- Main portfolio + 2 service page routes smoke-tested — all 200 OK

No hero redesign, no SEO/structured-data change, no database change, no new routes.
