

BEAUTYFOLIO · PHASE 3G.2 · STAGE 2

Approved CRM Cleanup — Execution Report

The Stage 1 audit's approved plan executed exactly as specified, inside one verified transaction: 6 invalid/test leads deleted, one accidental duplicate customer merged with both enquiries preserved, zero collateral damage to ambiguous or legitimate records.

Schema changes

0

Transaction result

Committed — all checks passed

Scope

Exactly the approved 7 rows, nothing more

6

LEADS DELETED
(APPROVED)

1

DUPLICATE CUSTOMER
MERGED

0

ORPHAN ROWS AFTER
CLEANUP

2

AMBIGUOUS ROWS
UNTOUCHED

1–3. Pre-Cleanup Snapshot & Deletions

Re-selected all 8 affected lead rows immediately before writing — identical to the Stage 1 snapshot, confirming no drift. Deleted exactly the 6 approved leads: 95bf77ab (dd/dd), 1f670b87 (dd/dd), 87c6989c (Test Lead curl/999999999), 88ac50a6 (Tulsi/Shah), fcb7b8f6 (Pooja/Singh), 4bd28ca9 (Pooja/Singh).

Cascaded child rows removed: 6 lead_inquiries (one per deleted lead), 3 lead_inquiry_services links (Tulsi + both Pooja/Singh rows), 3 lead_activities (only the auto-note rows — the "dd" leads and curl test had zero activities).

4–7. Pooja Singh Merge — Verified in Full

Canonical: f7030156-4268-4eeb-8d98-6fca545642d2 . Redundant (merged, then deleted): e56a2788-769f-419c-bd0e-0967183cddb4 . Re-parented the redundant lead's inquiry (e0ae278e-... , "Update") and its 1 activity note onto the canonical lead **before** deleting the now-childless redundant row. Live-verified after commit: the canonical lead has exactly **2 inquiries** (its own "Updatte me" plus the re-parented "Update", both with original timestamps and their own "HD Bridal Makeup" service tag intact) and exactly **2 activities** — neither enquiry was flattened, nothing was converted to text-only.

BEFORE

2 separate "Pooja Singh" lead rows, same phone, 32s apart, each with its own inquiry + activity

AFTER

1 lead row, 2 preserved inquiries, 2 preserved activities, both service links intact

8–10. Final Counts, Orphans & Duplicates

Metric	Before	After
Leads	13	6
Inquiries	13	7
Inquiry-service links	10	7
Activities	21	18

All numbers reconcile exactly with the approved plan's arithmetic. **0 orphan rows** anywhere (inquiries, inquiry-service links, activities). **0 duplicate valid-phone groups** remaining. **1 invalid-phone lead remains** — Kavya/Shukla — exactly as expected and intentionally protected, not a cleanup failure.

11–12. Ambiguous & Legitimate Rows — Confirmed Unchanged

Live-verified post-commit: `ad8daeeb` (Kavya, phone still exactly "Shukla") and `8c28d837` (Navya Panchal, phone still exactly "989898989") — both present, untouched. `76a2b735` (Rikesh), `c3ff2e89` (tushar), `4c76e672` (Jay Jogiya) — all present with original data.

13–14. Transaction Result & Database Changes

Committed successfully. Every verification (6 deletions gone, redundant Pooja gone, canonical Pooja has 2 inquiries + 2 activities, zero orphans, ambiguous/legitimate rows unchanged) ran *inside* the same transaction before `COMMIT` — any single failure would have raised an exception and rolled back the entire operation. **Database changes: zero** — no new tables, columns, flags, or RLS/FK changes; only `DELETE` / `UPDATE` on existing rows.

15–16. Manual Checks & Next Recommendation

Manual browser check needed: no automation available in this environment. `/dashboard/leads` confirmed loading (200) and the underlying data verified at the database level — please confirm visually that Pooja Singh appears once with both enquiries in her timeline, filters work, and "Open Lead" renders correctly.

Recommendation for 3G.2A: the dashboard's manual "Add Lead" form still has no phone-validation gap fix (same class of bug fixed for the public form in 3G.1A) — this is how "Kavya"/"Shukla" and "Navya"/"989898989" entered the system. A separate follow-up phase should add matching validation there.

Stopping here per the phase's STOP condition — not starting 3G.2A automatically.
