

BEAUTYFOLIO · PHASE 3G.2B

Jay Jogiya Duplicate Merge — Final Execution

The corrected-direction merge executed inside one verified transaction: four historical enquiries (Hair Cutting ×2, Hair Styling, HD Bridal Makeup) now live under one customer record, with all activities and service links intact and zero collateral impact on any other customer.

1. Fresh Pre-Flight Comparison

Re-selected both leads immediately before writing — state matched the corrected proposal exactly, no further drift since it was raised: canonical (5f5fdad4) still had 3 inquiries, 3 activities, status "new"; redundant (4c76e672) still had its original 1 inquiry, 1 activity, status "new". Safe to proceed.

2–3. Canonical & Redundant IDs

Canonical: 5f5fdad4-8ac8-4f1c-b3c2-5befcf5e3357 . **Redundant:** 4c76e672-238b-48fc-be64-1960797a8289 .

4–7. Re-Parenting & Preservation — Verified in Full

Re-parented the redundant lead's inquiry (Hair Cutting, event 2026-08-29 — the original public-form enquiry) and its 1 activity onto the canonical lead. Live-verified post-commit: canonical lead now has exactly **4 inquiries** — Hair Cutting ×2, Hair Styling, HD Bridal Makeup — each with its own event date and real `lead_inquiry_services` tag intact, nothing flattened or converted to text-only. Confirmed no existing activity already made the Portfolio-sourced enquiry clear, so appended exactly one factual note: "Historical enquiry merged from duplicate customer record — source: Portfolio, service: Hair Cutting." — no fabricated time, status, or interaction claims.

BEFORE

2 "Jay Jogiya" lead rows, same phone, split enquiry history (1 vs 3)

AFTER

1 lead row, 4 preserved enquiries, all service links intact, source history documented

8–9. Status/Follow-Up Preservation & Redundant Deletion

Live-verified unchanged on the canonical lead: status "new", no follow-up set, source "whatsapp", name/phone unchanged — none overwritten by the older redundant lead's values. Verified zero remaining inquiries and activities on the redundant lead *inside the same transaction* before deleting only that row.

10–13. Final Counts & Verification

Metric	Before merge	After merge
Leads	7	6 (–1, exactly as expected)
Inquiries	10	10 (unchanged)
Inquiry-service links	10	10 (unchanged)
Activities	21	22 (+1, exactly the one factual merge note)

0 orphan rows anywhere (inquiries, inquiry-service links, activities). All 5 unrelated customers (Pooja Singh, Kavya/Shukla, Navya Panchal, Rikesh, tushar) verified present and unchanged inside the transaction before commit.

14–16. Transaction Result & Changes

Committed successfully. Every verification (redundant gone, canonical present with correct phone, 4 inquiries, all 3 service tags present, zero orphans, all 5 unrelated customers unchanged) ran inside the same transaction before `COMMIT` — any single failure would have rolled back the entire operation. **Database/schema changes: zero. Code changes: zero.** Only `UPDATE / INSERT / DELETE` on existing rows — no RLS, FK, RPC, index, or constraint touched.

17. Manual Browser Check Required

`/dashboard/Leads` confirmed loading (200) — please visually confirm Jay Jogiya now appears as a single customer row with all four enquiries (Hair Cutting, Hair Styling, HD Bridal Makeup, and the original Portfolio Hair Cutting) visible in their history/timeline.

Stopping here per the phase's STOP condition.
