

BEAUTYFOLIO · PHASE 3G.4 · READ-ONLY AUDIT

End-to-End Conversion + CRM Launch Readiness Audit

A full system-level audit of the public conversion chain and CRM built across Phases 3G.1–3G.3D — classified by severity, cross-verified against live data. Zero code changes, zero database writes, zero migrations applied.

P0 blockers found	P1 must-fix found	Verdict
0	0	READY TO CLOSE 3G

✓ VERDICT: PHASE 3G READY TO CLOSE

No P0 or P1 issues found across public conversion, lead capture, CRM, attribution, or Insights. Only 3 P2 display/filter-consistency items and already-documented known limitations remain — none block launch.

P2 Findings (should fix soon — does not block launch)

ID	Finding
P2-1	CRM List/Cards/Pipeline toolbar Source/Service filters read only <code>leads.source</code> (first-ever) and the latest enquiry's services — not enquiry-aware across all enquiries, unlike the Insights drill-down (3G.3C). Concrete case: filtering by "Hair Styling" misses Jay Jogiya in the main List even though he has that enquiry, while Insights drill-down correctly finds him.
P2-2	"Services"/"Source" columns in List/Cards/Pipeline show latest/first-touch snapshot with no visual qualifier — could be misread as complete history now that 3G.3D established genuine multi-enquiry customers.
P2-3	<code>leads.source</code> is literally "first-ever source," never updated on repeat enquiries, but the UI label just says "Source" with no "(original)" qualifier.

All three are display/filter-layer only — no data loss, no security risk, full history remains visible in the 3G.3D multi-enquiry workspace either way.

Known Limitations (already accepted — not launch blockers)

- `leads.source` / `service_id` / `event_date` intentionally remain customer-level "current snapshot" fields (documented 3G.3A §19/§22, 3G.3D §21)
- `lead_activities` has no `inquiry_id` — activities remain customer-level only (documented 3G.3D)
- No multi-touch attribution, revenue/LTV, Google Ads/Meta integration, or Customer Growth OS — explicitly out of scope
- "Kavya" / phone "Shukla" (invalid, non-numeric) and "Navya Panchal" / "989898989" — pre-existing known test-like records, confirmed unmodified

Live Data Integrity (read-only, verified)

Table	Count
leads	9
lead_inquiries	15
lead_inquiry_services	15
lead_activities	27

Orphan inquiries: 0 · Orphan inquiry-services: 0 · Orphan activities: 0 · Duplicate customer groups (same profile + phone): 0 · Leads with zero inquiries: 0 · Invalid-phone leads: 1 (known "Kavya" record)

System Verification Highlights

WhatsApp integrity: exactly one unique wa.me number across the entire live portfolio page — no hardcoded/mismatched numbers.

SEO: canonical, robots (index,follow), title, and 1 JSON-LD block all confirmed intact on the live page — zero regression from any 3G.3/3G.3A–D work.

GTM: zero analytics script present with VITE_GTM_ID unset — confirmed live, no network dependency.

Trust/claims: no fabricated guarantee/scarcity/government-verification language found; success state explicitly says "not a confirmed booking."

Data-loss risk: searched every `.delete()` call in the data layer — the only one touching lead data (service-tag replace on edit) never cascades to inquiries/leads. No UI path exists anywhere that can delete a lead or inquiry row.

RLS/Security: every CRM table (leads, lead_inquiries, lead_inquiry_services, lead_activities) has an active owner-scoped policy chained through `owns_beautician_profile()`. The one cross-profile query found (admin leads view) is correctly gated by an explicit `assertIsAdmin()` role check.

Deduplication/idempotency: zero duplicate customer groups live; 5-minute idempotency window and enquiry-level attribution independence both re-confirmed against the 3G.3A live test evidence.

Route Smoke-Test Matrix

Route	Result
/	200
/portfolio/dharti-panchal	200
service page	200
/dashboard/profile, services, gallery, before-after, videos, packages, faqs, reviews, availability	200 (all)
/dashboard/service-areas	404 — naming mismatch only; real route <code>/dashboard/areas</code> confirmed 200
/dashboard/leads	200
/sitemap.xml, /robots.txt	200 (both)

Build / Type / Lint

Check	Result
tsc --noEmit	Clean
npm run build	Succeeded
ESLint functional errors	0
ESLint formatting debt	115 pre-existing prettier issues, all outside 3G scope (home-page marketing components), not a regression
Warnings	7 dev-only react-refresh warnings, 6 in vendor shadcn/ui files

Launch-Readiness Scorecard

Area	Status
Public portfolio reliability	READY
Service-page reliability	READY
Conversion CTA reliability	READY
Lead capture	READY
Customer deduplication	READY
CRM integrity	READY WITH MINOR ISSUES (P2-1/2/3)
Multi-enquiry model	READY
Follow-up workflow	READY
Attribution	READY
Insights	READY
Mobile	READY WITH MINOR ISSUES (code-reviewed only, not device-tested)
Security/RLS	READY
SEO regression	READY
Performance/build	READY

Minimum Fixes Required Before Closure

NONE. No blocking correction plan is needed to close Phase 3G.

Items Explicitly Deferred After Launch

- P2-1/2/3 — CRM List/Cards/Pipeline filter enquiry-awareness and snapshot-labeling clarity (recommended first small follow-up phase, not urgent)
- Live mobile/device browser testing (no browser automation available at any point in this engagement)

- `lead_activities.inquiry_id` — a genuine small schema change, correctly not applied without explicit approval
- Customer Growth OS, billing, LTV, Google Ads/Meta integration, revenue analytics, automation — explicitly out of scope per this phase's own instructions

No code was modified. No database data was modified. No migrations were applied, per this phase's read-only constraint.
